## BHI tutor John Reynolds FBHI on the advantages of getting 'wound up' properly!

People repairing clocks really should have the correct equipment, as springs like these have been a frequent sight of late.

The spring in **Photo 1** has been spoilt for lack of a mainspring winder, a tool which, once purchased, will last a lifetime and save the life of a good many springs.

On the **Antique Clocks Part I** course at the beginning of July, I saw a prime example of a pair of French clock mainsprings which obviously have been rewound and replaced without a proper mainspring winder, **Photo 2** – these would make better earrings than mainsprings.

They are available from numerous Horological Tool outlets, including JM

Wild, Meadows and Passmore, HS Walsh & Sons and Cousins Material House.
